

How To Care For Your Wrap

To maximize your vehicle wrap life, reduce premature failure and surface damage follow these simple maintenance instructions.

The Decals Source Inc. cannot be held liable for damage to vehicle surface, painted, and not painted surfaces caused by vehicle wraps if the instructions below are not followed.

Hand Wash

Taking your car to the automatic car wash can cause damage because of excessive water pressure and strong cleaning agents. It is better if you hand wash your wrap with only mild cleanser. Mechanical car washes will void the installation guarantee in many cases and are not recommended.

Do Not Use Harsh Chemicals

Try not to use harsh cleaning agents. This also means not allowing gasoline to drop on the wrap. Gas and other harsh solvents can eat away and destroy the print. Avoid abrasive cleaning supplies as well because they can scratch the wrap.

Hand Wax Carefully

If you plan on hand waxing your wrap, try to make sure to always use a polymer-based wax. Many institutions offer wrap polishes that can do the job while keeping your vehicle wrap in mind. These can be found in auto parts stores.

Take Action

Natural outdoor elements can be tough on your wrap. If you notice part of your vehicle wrap is wearing, contact us immediately. The sooner we can take care of it, the better chance of restoring the wrap.
